Exterior Colours
LUXALON® EXTERIOR CEILINGS - A PROVEN SYSTEM

Exterior building applications need to contend with a wide range of severe outdoor conditions. Luxalon® Exterior Ceilings of Hunter Douglas have proven extremely durable for more than forty years; developed with surface-treated panels and a windproof suspension system, they stand up to the harshest conditions.

Architects and designers worldwide know the strength of Luxalon®, and have installed these ceilings in prestigious locations including airports, railway stations, office buildings, shopping malls and hotels.

ANORCOAT - THE KEY TO DURABILITY

After degreasing and cleaning the aluminium substrate, an anorcoat conversion layer is applied to the product. This conversion layer accomplishes two things:
- Permanently anchors the paint to the aluminium surface
- Prevents the aluminium surface from corroding

Anorcoat is the key to the excellent performance of the Luxacote® system; it provides far superior protection than conventional conversion layers.

PRIMER - FOR ENHANCED LONGEVITY

Over the anorcoat we apply a primer that seals the substrate, resulting in enhanced longevity of the panels.

TOPCOAT - THE FINAL TOUCH

The pigments in the polyurethane topcoat provide the panels their colour while the integrated polyamide particles are the finishing touch of the Luxacote® system, giving products a scratch- and wear-resistant surface. Additionally, the polyamide particles protect from UV rays, improving the durability of the colour and gloss. Hunter Douglas has completely integrated the application of Luxacote® into the production process. The result: extremely durable products with slightly textured surfaces that manage potentially damaging outdoor conditions.

Colours may vary from the original

Visit our website: www.hunterdouglasarchitectural.eu
Products for exterior applications are preferably made from aluminium because of its durability, lightweight, and the many attractive finishes that may be applied. The HunterDouglas® Exterior product range includes Exterior Ceilings, Single Skin Façade Claddings and Sun Louvres. These products are available in various panel types and widths as listed in the overview below. The numbers next to the pictures refer to the corresponding column in the colour availability overview. Hunter Douglas has developed a patented coating system for its external architectural applications named Luxacote®. (See reverse side)
